ABSTRACT:

PURPOSE: To surely capture dust over a wide range by partially joining and integrating a fabric base consisting of a non-woven fabric to a base plate sheet and imparting many rugged shapes on the wiping surface of the fabric base, thereby bulking the surface.

CONSTITUTION: The sheet 10A for cleaning is constituted by integrating the non-woven fabric-like fabric base 12 formed of the entanglement of fibers by partial joining to one surface of the base sheet 11. The joint parts of the fabric base 12 form rugged parts 12B and the non-joined parts thereof form projecting parts 12A, thus constituting the cleaning surface sheet 10A having the rugged shapes on the surface as a whole. The constituting fibers of the base fabric 12 contains thermally fusible fibers. Further, the sheet 10A for cleaning is laminated with a non-woven fabric net 16 integrated by the entanglement of the fibers having the interfiber distances larger than the interfiber distances of the fabric basic 12 on the outer side of the fabric base 12. A sheet consisting of a composite blank material formed by using synthetic resins is used as the base sheet 11. The fibers contg. components having a m.p. lower by $\geq 10^{\circ}\text{C}$ than the m.p. of other constituting fibers of the fabric base 12 are used as the thermally fusible fibers incorporated into the fabric base 12.
